PROFILE

I am a ComputerScience and Engineering student at the University of Moratuwa, passionate about building efficient software and solving real-world problems. I have practical experience in coding, data structures, and system design, and enjoy turning complex ideas into clean, working solutions. Eager to learn, collaborate, and contribute to impactful projects in software development and research.

EDUCATION

University of Moratuwa , SriLanka

May 2024 -Present

- BSc. Eng. in Computer Science and Engineering
CGPA (up to semester 4) : 3.22/4.0

Paddiruppu National School ,Kaluwanchikuddu

Aug 2020 - Jan 2023

- G.C.E. Advanced Level Examination (3A Passes in PhysicalScience Stream)
Z-Score: 2.1146

PROJECTS

Multi-Tenant Resource Sharing Platform | Semester 5 Software Engineering Project (Ongoing) ([Repo](#))

- Technologies: React.js, FastAPI, PostgreSQL, Redis, Docker, OAuth 2.0, WebSockets, Swagger/OpenAPI
- Developing a microservices-based resource sharing platform for university communities that enables secure authentication, multi-tenant resource management, real-time booking and notifications, and a points-based borrowing system through a responsive web application.

Uni-Find – University Lost & Found Resource Sharing Platform | (Ongoing) ([Repo](#))

- Technologies: React.js, FastAPI, PostgreSQL, SQLAlchemy, JWT Authentication, Docker, Swagger/OpenAPI
- Developing a full-stack web application for university communities that enables users to report lost and found items, securely authenticate using JWT, search and manage listings, and facilitate communication between owners and finders through a responsive and scalable architecture.

Smart Banking Management System | Semester 3 Database Systems Project ([Repo](#))

- Technologies: Python (FastAPI), React, PostgreSQL, AWS EC2
- Developed a full-stack banking management system as part of a 5-member team, featuring secure authentication, transaction processing, fixed deposits, automated reporting, and separate customer and agent portals.

Industrial Predictive Maintenance System | Semester 4 Software Engineering Project ([Repo](#))

- Technologies: Python, SciPy, Apache Kafka, Next.js, Chart.js, Docker, Kubernetes, MLflow, Grafana, ELK Stack, Raspberry Pi/ESP32
- Developing a scalable IoT-based predictive maintenance system that collects industrial sensor data, performs edge processing, streams real-time data, predicts machine failures, and visualizes insights through a web dashboard.

TECHNICAL SKILLS

- Programming Languages : Python, C/C++, HTML, CSS, JavaScript
- Frameworks : React , Node.js , FastAPI
- Database : MySQL , PostgreSQL
- Tools : Git , REST API
